Counting stock level for shops and warehouses, using manual methods or scanners.

Counting stock level for shops and warehouses, using manual methods or scanners.

Writing components for the Jubler subtitle editor in Java, on Windows and Linux with Subversion

branch, introducing features allowing the software open, import binary subtitle formats including

file-names storing along the equivalent subtitle text), performing OCR on image based subtitles -

allowing them to be translated to different languages, using web-based translation tools, such as

subtitled programs. The software is intended for personal use in DVD authoring needs and thus its

Worked as a contractor, translated company Java Web-based software interface into Vietnamese.

Assisted pastor of Deptford Chinese and Vietnamese church with translations in church meetings, visiting

and providing practical assistances to Chinese and Vietnamese living in the South-East London.

Completed studying MSc Advanced Software Engineering. Modules taken includes: E-application

development, Open Distributed Programming, Internet and Web fundamentals, Web Services, Compact

Worked in Project Engineering Group and carrying out all project related activities, including covering the

the group, researching 3rd party products and contributing to product requirements analysis and turning requirements into product specification. Also involved in estimating and schedule detail work schedules,

developing detailed design and resolving design issues, providing unit and integration, system tests, from

component up to integration levels, which includes investigating and fixing software problems, logical and

All lower level routines and libraries of the software were written in C. The higher level of codes were written

Worked in distribution and manufacturing department to maintain current released product, analysing issues,

prioritise work schedules with production manager, plus raising ideas for process improvement. Also design

and develop new functionalities. Worked with controlled guidelines - TickIT(ISO9001) accredited Quality

Management System. The work expanded across several operating systems, including MS Windows, Unix

Systems must be taken into account when a line of code is issued. The development initially was on Unix but

later was moved to Windows, using the combination of MS Visual C and Cywin compiler, plus development

Maintaining and developing company's software product on DOS and Unix operating system with integration

customer supports. The entire software was written in Unix, but needed to convert to DOS, and compiled in

of DBIII database, plus providing data conversion, technical backup and training as necessary, including

Watcom's DOS extender compiler. Many low level routines needed to be rewritten, making use of DOS's

interrupts, and general routine calls that was not available on DOS also was re-engineereds.

Interpreting for in/out patients and social services in Vietnamese, English and Cantonese.

Co-ordinated with planning manager in business administration, establishing and maintain departmental

Managing refugee filing system, updating data and carrying out general office duties. Helping case workers

translating and Interpreting for consultations with refugees in Vietnamese, English and Cantonese (spoken).

filing system, produce planning reports and maintained Q/A procedure, also performing general

finding, design and implement fixes, unit testing and releasing fixes to support channel. Discuss and

The entire software CS3 was written in C, and with many platforms involved, variations of Operating

routines. Just before I left the company, Java was introduced into the software development.

(HP-UX, Sun Solaris, SCO open server, IBM RS6000, IBM AIX and Dec Alpha.

in TCL, an interpreter language. Most of the code were rewritten later in C++.

entire software development life-cycles and phases, providing technical advice to others, inside and outside

Framework Development with C# and .NET, Security, Distributed Processing Systems, Software Engineering

Corrected layouts in JS or CSS where possible. Also translated help files, provided audio

interpretations and dubbing on tutorial video clips, rendering them to MPEG compliant media.

using external open source OCR software Tesseract - which converts images into editable text,

Google translation - using Google API. Also introduce functions to correct duplications in live

usability and accuracy are of vital importance besides its robustness. Features developed on

development branch are being transferred to the mainline for release to the public.

and then Mercurial source version control. Contribution area covers mainly the development

SON (image based), SUP (compressed image-based using variable-length-encoding (VLE)),

TMPGenc Subtiles - with the introduction of SWT (SON with text, allowing both subtitle image
